

# CLEAR Global needs your help to respond to climate change.

At CLEAR Global, we help people in climate emergencies get lifesaving information, whatever language they speak.

**The problem:** people need information to protect themselves from climate catastrophes

- Climate change disasters went up by 83% over the last 50 years, causing severe damage.
- Extreme weather harms agriculture, the economy, and people’s well-being. Vulnerable groups, such as people in poor health or with few resources, are particularly affected.
- Food insecurity has increased in the last six years, affecting 30% of the world population. Crop yields could decline by up to 30% by 2050, which would worsen the situation.

## CLEAR Global’s solution

We help people understand climate change and the actions they can take to prepare and protect themselves.

Our language data and communication tools are used in emergencies to improve two-way communication between humanitarians and people affected by climate change disasters. This enables a more efficient crisis response, especially in linguistically diverse communities, who often struggle most to access information and services in times of crises.

In the **Americas**, we deployed rapid response teams in several hurricane crisis situations in 2017. Over 100 people worked to translate 15,000 words of critical guidance on shelter management, storm preparedness, and relief into six languages.

In **Nepal**, our team of translators worked 24/7 alongside first-response aid agencies to translate messages from people affected by the 2015 earthquake, moderate social media, translate first-aid documents, and transcribe videos to improve the response.

In **Mozambique**, following Cyclone Idai in 2019, we provided language support, including translation, language assessments, and language mapping. We provided lifesaving information in multiple languages to help people learn how to protect themselves, where to find shelter, ask for additional support, and more.

When Typhoon Haiyan approached the Philippines, Translators without Borders gave a fast response to our request, helping monitor social media in language and translated text and video messages. The support helped save lives and also provided message relay support to reunite families who were rescued.
